

# NH Digital World

*The Way of Dream* — A human-activity-driven digital ecosystem where value is created through real engagement, not computational power.

WHITEPAPER

PROOF OF HUMAN ACTIVITY

A New Paradigm

# Why NH Digital World?

Traditional crypto systems reward those with the most hardware or capital. NH Digital World is built differently — value flows to those who **show up, engage, and contribute.**

## No GPU Mining

No expensive hardware required to participate

## No Energy Waste

Zero proof-of-work carbon footprint

## No Passive Rewards

Effort, engagement, and utility drive value

PHASE 1

# NH Mining — The Entry Point

NH Mining is the gateway into the ecosystem. Every tap is a proof of human presence.

1,000 Taps

= **1 NH Note** earned

5,000 Taps

Daily cap — **5 NH** maximum per user

+500 Taps

Referral bonus after **valid activity** confirmed

- 📄 NH Notes at this stage are **off-chain digital assets** — recorded, tracked, and preserved for seamless blockchain migration. Anti-bot design ensures fair distribution for every real human participant.

# Off-Chain Asset System

Every NH Note earned is not just a number — it is a **verified digital record** anchored to the user who earned it. These records form the foundational ledger for blockchain migration.

Each note is stored with four immutable fields that together constitute activity-based proof of ownership.

PHASE 3

# Blockchain Integration

NH Notes migrate to fully on-chain tokens — **NHN** — via a user-triggered claim mechanism. No balance is lost, no value is diluted.

1 NH (Off-Chain)

Verified activity-based note

= 1 NHN (On-Chain)

ERC-20 token on EVM-compatible blockchain

# Tokenomics

## Total Supply

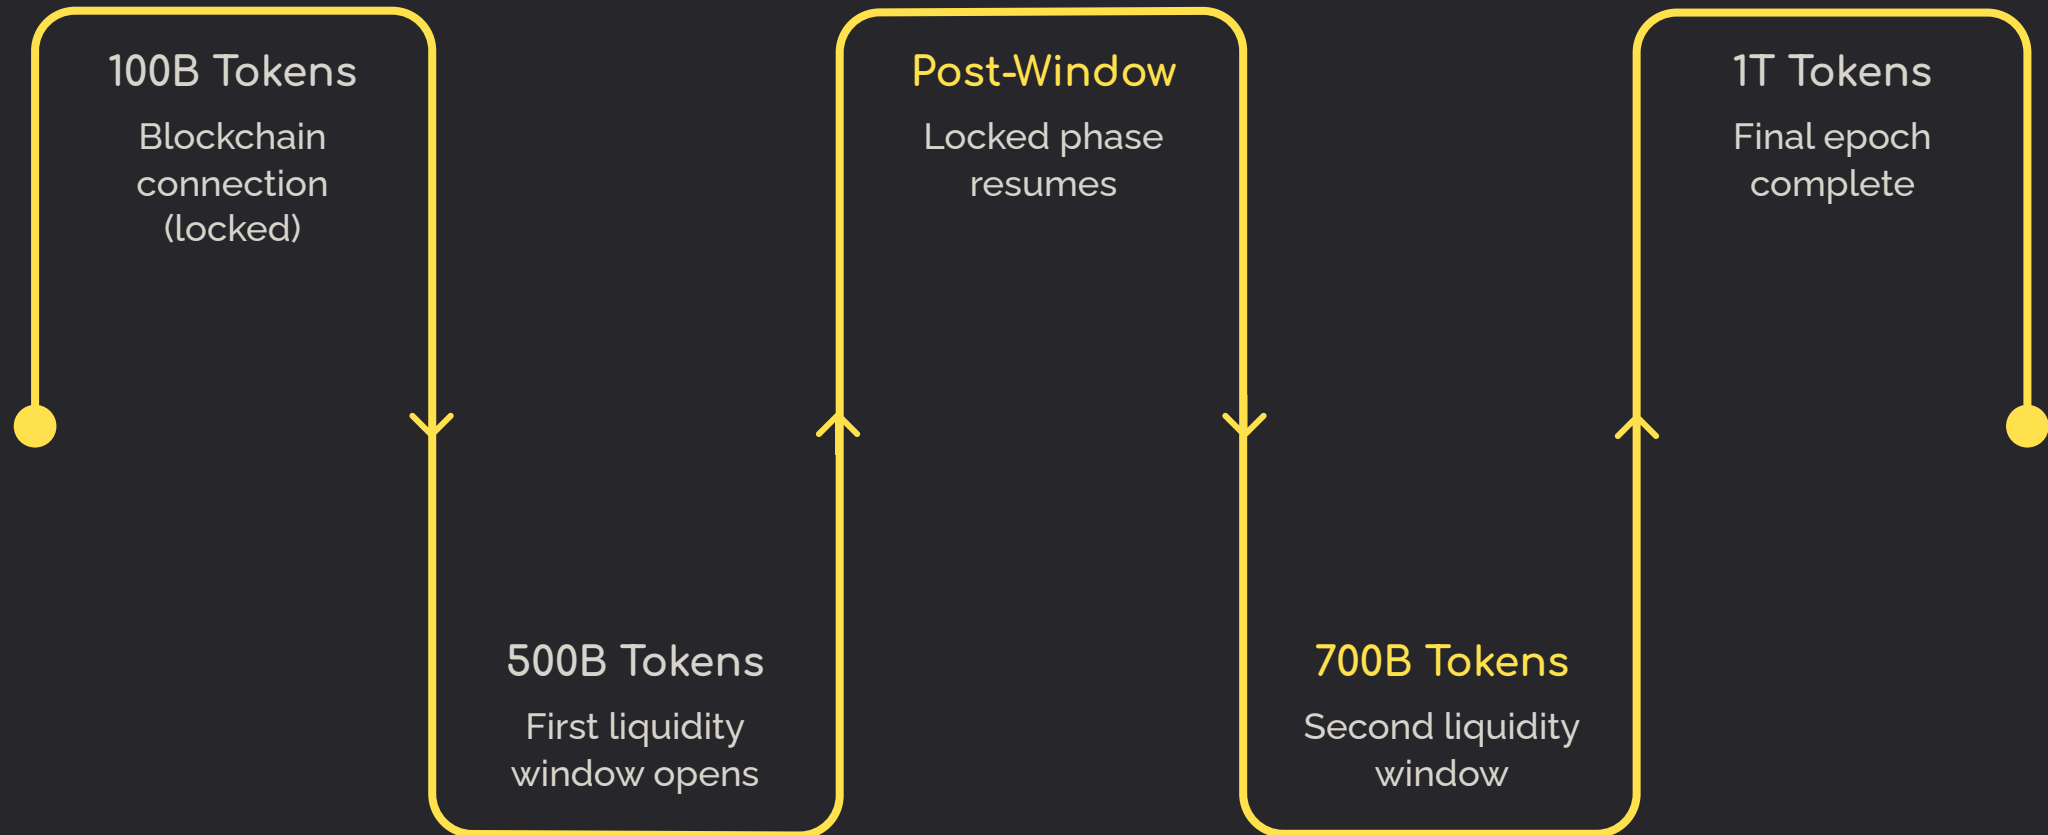

1 Trillion **NHN**

Mining halts **permanently** once max supply is reached — creating a hard, predictable scarcity ceiling.

- ~40% — Market & Liquidity pools
- 30–40% — NH Digital World utility layer
- ~20% — Holding & locking incentives

# Liquidity Epoch System

NHN uses a **phased transfer model** designed to prevent manipulation, reward long-term holders, and control supply flow across the full distribution lifecycle.

Each liquidity window is deliberately gated — tokens unlock in controlled bursts, preserving ecosystem stability and discouraging speculative dumping.

## UTILITY LAYER

# NH Digital World — Where NHN Lives

NHN tokens are not merely tradeable assets — they are the **fuel of the NH Digital World utility layer**, powering every interaction, transaction, and feature within the ecosystem.

### Engagement Rewards

Active participants earn NHN through verified human activity across the platform

### In-Ecosystem Spending

NHN powers purchases, access, and services within the NH Digital World marketplace

### Locking Incentives

Users who lock NHN contribute to ecosystem stability and earn priority access to liquidity windows

# Proof of Human Activity

## PoHA

- **human taps and engagement** 
- **fair distribution** 
- **no hardware** 
- **anti-bot design** 
- **energy efficient** 

## Traditional Crypto

- **GPU mining** 
- **capital-heavy** 
- **energy intensive** 
- **passive rewards** 
- **hardware dependent** 

## A Fundamental Rethink

Proof of Human Activity (PoHA) is NH's core consensus philosophy — replacing computational arms races with a model that rewards **real people doing real things**.

- Democratised access — no hardware barrier
- Sustainable by design — zero energy overhead
- Anti-bot architecture built into the protocol
- Effort and consistency are the new mining rigs

# The Way of Dream

NH Digital World is more than a token — it is a reimagining of who deserves to benefit from a digital economy.

## Mine with Intent

Tap daily. Build your balance through consistent human activity.

## Migrate with Confidence

Your off-chain notes convert 1:1 — no value lost, ever.

## Grow with the Ecosystem

NHN unlocks utility, liquidity windows, and long-term upside.
